

## ENVIRONMENTAL POLICY

DeltaNordic is a total systems supplier for the most demanding conditions, delivering solutions for world-class electric and electronic systems throughout the product lifecycle – from design to after sales.

We work with short and long term goals, action plans and continuous improvements. The purpose is to reduce our total impact on the environment.

Part of our environmental management is to protect and prevent pollution of the environment. This is done by identifying potential risks and manages these risks by corrective and preventive actions. We strive for a sustainable environment.

It is every employees concern and responsibility to be aware of and immediately report or manage potential threats to the environment during daily operations.

We work according to applicable laws and requirements.
