

## QUALITY AND ENVIRONMENTAL POLICY

DeltaNordic is a total systems supplier for the most demanding conditions, delivering solutions for world-class electric and electronic systems throughout the product lifecycle – from design to after sales.

We work with short and long term goals, action plans and continuous improvements.

Our products shall be delivered in accordance with customer requirements and order, with quality and on time. To meet customer requirements we continuously improve our processes and routines to create a more effective organisation.

Part of our environmental management is to protect and prevent pollution of the environment. This is done by identifying potential risks and manages these risks by corrective and preventive actions. We strive for a sustainable environment.

We regularly follow up on key performance indicators and if goals are not met root causes and corrective actions are identified.

It is every employees concern and responsibility to be aware of and immediately report or manage potential threats to the environment during daily operations.
